

This semester has been a big learning opportunity for the team. We started from scratch on S.I.F.T, but we grew it to have working, albeit simple, UI. However, we have learned much about cross-platform development. For instance, Windows stores paths differently compared to Mac. We used pathlib to fix these path issues, and to make sure our application works on different platforms, since the team understands RPI students use a wide variety of devices to work on their CS homework.
